## Constructor Detail

### Game

```
public Game()
    Sets up a run of the navigation program, a "game".
```

## Method Detail

### changeLocation

```
public void changeLocation()
    Changes the current location depending on the button pressed on the GUI.
```

---

### changeOrientation

```
public void changeOrientation(String newOrientation)
    Changes the current orientation depending on the button pressed on the GUI.
Parameters:
    The - direction passed by the user
```

---

### createItems

```
public void createItems()
    This method is responsible for setting up the items and adding them to the item list.
```

---

### createLocations

```
public void createLocations()
    This method is responsible for setting up the locations.
```

---

## getCurrentImage

```
public javafx.scene.image.Image getCurrentImage()
```

Retrieves the current view to display depending on the current location and orientation.

**Returns:**  
An image to display.

---

## getItemList

```
public ArrayList getItemList()
```

Passes the current item list

**Returns:**  
The current item list.

---

## getLocation

```
public Location getLocation()
```

Tells the current location in the game

**Returns:**  
The current location in the game

---

## getOrientation

```
public String getOrientation()
```

Tells the current orientation in the game

**Returns:**  
The current orientation in the game

---

## isForwardPossible

```
public boolean isForwardPossible()
```

Tells if there exists a neighbor location in front of the current view

**Returns:**  
A boolean value that tells the GUI if it is possible to go forward.
